2. Citations and explanations (Rule 70.7)

Reference is made to the following document:

D1: US 4 948 985 A

The application fails to meet the requirements of PCT Article 33(1) because the subject matter of claim 1 is not novel (PCT Article 33(2)). Document D1 discloses the following:

A water-wheel motor (see figure 1, in which the wheel (24) is shown unenclosed), consisting of a flow supply device (18) located under the wheel (24) and a flow discharge device (48), also located under the wheel, the wheel being rotatably mounted about an axis of rotation (see figure 1), and with blades (22) attached to the wheel, the blades being impulse blades (the energy conversion takes place as a result of a change in the velocity vector of the water flow as it strikes the blades).

Dependent claims 2 to 4 do not contain any features that meet the PCT requirements in respect of novelty or inventive step when combined with the features of any of the back-referenced claims.
